**INTRODUCTION**

Through years of field application experience, research and development, we have designed products that meet the stringent requirements of today’s process industries. Bray has earned a reputation of excellence by creating products of superior value and quality, providing personalized customer service and on-time deliveries. Our success has always been the direct result of our fully integrated, full range butterfly valve and control product lines. Rugged and reliable, our products are engineered to provide years of trouble free service.

**Bray products are used in a wide range of industries worldwide including:**

- Chemical
- Beverages
- Pharmaceuticals
- Food Processing
- Petroleum Refining & Oilfield,
- Transportation
- Microprocessors
- Marine
- Pulp & Paper
- Mining
- Power/FGD
- Irrigation
- Water & Wastewater Treatment
- Textile
- Desalination
- Steel Production
- Sugar/Ethanol
- HVAC
- Breweries/Wineries

---

**PRODUCT QUALITY & PRECISION**

Assuring product quality, precision manufacturing and internal process integrity, Bray Controls has been certified to ISO9001 quality standard. The certification of compliance was issued by Lloyd’s Register Quality Assurance (LRQA), a worldwide independent certifier. The basis for Bray Controls high level of quality assurance are the quality control guidelines and procedures submitted, reviewed and approved in accordance with criteria established within ISO 9001:2008 and EU Directives.

“Bray Controls is focused on and committed to meeting the expectations and needs of our customers while continually improving the effectiveness of our quality management.”

- All Bray valves are pressure tested to 110% of rated pressure to assure bubble tight shutoff.
- All Actuators are calibrated and cycle tested before shipment. Pneumatic actuators are also pressure tested to assure no leakage.
- Material Traceability - Certification is provided for all valves upon request for all pressure retaining components.
- Positive Material Identification - PMI testing is used to verify material acceptance criteria.
**BRAY SERIES 70 ELECTRIC ACTUATOR**

Output Torque: 300 Lb-in (34 Nm) to 18,000 Lb-in (2,034 Nm)

Bray Controls' years of proven success in electric actuation, combined with innovative engineering, has produced the Series 70. The Series 70 features on-off or modulating control.

Bray’s Series 70 electric actuator has many advantages over other actuators including:

- UL, CSA and CE certification of most units
- Wiring directly to the terminal strip without interference from other components
- Simple and unique manual override handwheel system
- Lowest profile and lightest weight actuator on the market
- Simple finger or screwdriver adjustment of travel limit cams without interference from other components
- Highly visible valve status display on most units

Designed like a junction box, the Series 70 offers by far the easiest access to terminal block wiring, cam adjustments and switch installation. Therefore, the time required for field start-up and adjustment is greatly reduced, and maintenance can be performed with assured ease and safety.

**EXPLOSION PROOF ENCLOSURE**

The Series 70 optional waterproof/explosion proof unit is UL NEMA 4,4x listed and certified to specifications for USA & Canadian hazardous locations Class-I C&D Div 1&2; Class-II GRPS E&G Div 1&2. The rugged, heavy duty housing contains precision machined bores and flanges to meet flame path requirements. Waterproof/Explosion proof models are currently available with 800 to 2,000 lb.-in. output torque, continuous or intermittent duty.

**TRAVEL LIMIT SPDT SWITCHES:** Bray has provided two SPDT mechanical switches as standard. These durable, high quality switches are mechanically isolated and electrically independent. The dedicated circuits eliminate any voltage crossover between the switches. This switch combination is used for both open and closed positions of the valve and requires only one cam for each direction of valve travel. Bray’s design provides synchronicity between motor control and position display. Switches are easily accessible without interference from other components. Each switch is marked with open or close labels and the cams are color coded, green for open and red for close, eliminating the possibility of incorrect wiring.

**CAM ADJUSTMENT:** Bray’s patented cam design is an outstanding feature of the Series 70. Cams for each switch are infinitely adjustable by finger touch or screwdriver with no special tools needed. The adjustment knobs rotate the specially formed cams. Each cam is color coded – the red adjustment knob controls the red cam (close position), and the green knob controls the green cam (open position). Standard factory setting allows 90° travel between open and closed positions.

**CONDUIT ENTRIES:** Two connections in either NPT or metric threads. One entry is for power, the other for control wiring.

**TERMINAL BLOCK:** The actuator switches are pre-wired to an easily accessible terminal block. Terminals are clearly identified for customer wiring. The block has been placed near the two conduit entries with ample room for running wire leads. A wiring diagram is included inside the cover for easy reference. The ground wire screw is plated green and positioned for easy access.

**VALVE STATUS DISPLAY:** Prominently labeled and color coded – yellow for open, red for closed – the display indicates valve position through the full range of travel. The display can be seen from almost any angle. Made of high impact, heat and chemical resistant clear polycarbonate, this display withstands caustic wash down and offers excellent corrosion protection. Potential leak paths are eliminated since the indicator cover utilizes a static seal, not a dynamic seal.

**INTERPOSING RELAY:** The time delay provided by the Interposing Relay will protect the switches and gears from the controller’s instantaneous command signal reversal. This feature also allows for parallel wiring of multiple actuators.

**MANUAL OVERRIDE:** A manual override handwheel is standard on all models to rotate the valve without electrical power. A yellow caution stripe around the handwheel hub becomes visible when the handwheel is engaged for manual operation.

**AUTOMATIC POWER CUTOUT SWITCH:** The Series 70 is supplied with a SPDT mechanical switch which cuts power to the motor when the handwheel is engaged for manual operation.

**O-RING SEAL FOR WATERTIGHT ENCLOSURE:** The large seal between the cover and base provides a waterproof seal and prevents internal corrosion. The Bray Series 70 O-ring seal is a superior design to continuously used gaskets.

**ENCLOSURE:** The Series 70 waterproof unit is UL NEMA 4, 4x listed. Die-cast aluminum cover and base are high-quality polyester powder coated for exceptional corrosion, wear, impact and ultra-violet resistance.

**CAPTIVE COVER BOLTS:** The cover is attached to the base by stainless steel bolts. When the cover is removed the bolts are held captive in the cover. This prevents time consuming problems from lost or misplaced bolts.
BRAY SERIES 70

POWER CENTER

Bray designed the Series 70 to completely separate the Control Center from the Power Center. The Power Center, located in the actuator base, consists of motor, gear train, capacitor, output drive and heater. This design protects the power drive system as each component has been engineered to require no customer servicing. The Power Center components have been uniquely configured to maintain the extremely low profile of the Series 70.

SELF-LOCKING OUTPUT DRIVE ASSEMBLY: The output drive assembly features a self-locking worm and worm gear drive which holds the valve in the desired position without the need for electro-mechanical braking systems. The worm shaft directly drives the worm gear.

MECHANICAL TRAVEL STOPS

Stainless steel mechanical travel stops are field adjustable to prevent over travel when manual override is in use. The travel stops are located outside the base for easy readjustment without removing the cover. Stainless steel lock nuts with O-ring seals hold the travel stops securely in place. The travel stops are normally set at the factory to allow 0° and 90° travel.

MANUAL OVERRIDE HANDWHEEL ASSEMBLY

- Pull to engage for manual operation.
- Rotate handwheel to position valve.
- Push to return power operation.

The Bray manual override system ensures positive and fast manual operation without the use of extra tools or levers. When the hand-wheel is engaged, the electrical power to the motor is cut off by means of the Automatic Power Cutout Switch. When engaged, the manual override shaft is held in position by a Ball Detent. The Ball Detent also holds the shaft in position when the hand-wheel is pushed in to disengage the override. The Drive Pin engages and disengages the manual override shaft from the worm and segmented worm gear output shaft. When the handwheel is pushed or pulled, the drive pin smoothly engages the worm shaft.

ONE PIECE WORM GEAR, DRIVE SHAFT

The drive shaft is the driving member that positions the valve. The worm gear drives the valve status display shaft which operates the infinitely adjustable cams to limit the electrical travel of the actuator.

MOTOR: 115 or 220 VAC single phase permanent split-capacitor reversible induction motor. The motor features a built-in thermal overload protector of a bi-metallic strip in the windings set at 275°F (135°C) with automatic reset.

GEAR TRAIN: The heavy-duty spur gear train is composed of precision cut, multi-staged gears and shafts. The gears and shafts are heat treated high alloy steel. The gear train is permanently lubricated at the factory.
SERVO PRO FEATURES / SPECIFICATIONS
Servo is available for modulating service, continuous duty actuators only.

| Input Signal | Standard: 4-20 mA DC  
Configurable: 1. 0-10 VDC  
2. 2-10 VDC  
3. 10K Ohm or greater potentiometer |
| Calibration | Single Button Autocalibration |
| Indicators | Power: Green LED  
Status: Flashing Red / Green LED  
Motor: Red LED (Close), Green LED (Open) |
| Control Modes | Standard: Full Range, Direct Acting  
Configurable: Reverse Acting, Split Range |
| Fail Position (Loss Of Input Signal) | Standard: Fail Closed  
Configurable: Fail Open |
| Control Characteristic | Linear |
| Duty Cycle | 100% |
| Internal Feedback | 10K Ohm Potentiometer, gear driven |
| Retransmission Output | Standard: 4-20 mA DC  
Configurable: 0.5-10 VDC, 0-10 VDC, 2-10 VDC  
Retransmission Output is designed to drive an isolated 250–500 Ohm resistive load. |
| Speed Control | Standard: Full Speed (Speed Control is Disabled)  
Configurable: Bidirectional–Independent  
Open and Close Trim Pots adjustment |

"Standard" is the way the Servo is set at the factory.  
"Configurable" means the customer, or the factory, can modify the Servo by setting DIP switch(es).
BRAY SERIES 70 OPTIONS

The conduit entry panel has four holes which may be easily tapped for the installation of optional local Control Station.

CONTROL STATION: The conduit entry panel has four holes which may be easily tapped for the installation of optional local Control Station. The Control Station features a local-off-remote control switch, an open-stop-close switch, and two lights which locally indicate open and close valve position. The cover plate can be rotated in any 90° increment, allowing the customer to operate and view the station with ease. The enclosure is aluminum and weatherproof (NEMA 4, 4X, IP 65). Additionally, the control station has captive cover bolts and two cable entries available in the following thread connections: 3/4” NPT or M25. Two different multi-pin, watertight electrical cable connections are also available.

BATTERY BACKUP: To meet consumer needs, Bray Controls has developed the Battery Backup Unit (BBU) for the 24 VAC/ VDC Series 70 Electric Actuator. In the event of power failure, the BBU will switch the actuator to battery power to reach its fail-open or fail-closed position. After the actuator has reached its fail position, the BBU turns off until external power is restored. Once external power has been restored, the actuator returns to the control device’s command position.

- Power Requirements 24 - 27 Volts AC or 30 - 38 Volts DC for full charge battery condition
- Battery Conservation Mode Turns the BBU off when the actuator has gone to the programmed fail position. The charging circuit prevents over charging of the batteries
- Easily configured Field selectable control circuit
- Battery Monitoring Feature Includes a local green LED indicator light on the BBU cover which lights up when the batteries are adequately charged and functional. A normally open dry contact is included that may be used to operate a remote alarm
- Dependable The two sealed batteries provide more than sufficient power to operate the actuator for its one fail-open or fail-closed cycle

MECHANICAL TORQUE LIMITING SYSTEM - optional

The mechanical torque limiting system consists of a Worm Shaft, a Worm, a set of Torque Disc Springs and a Shaft Groove for torque limiting switches. The torque disc springs, located on each side of the worm, resist the linear movement of the worm shaft. The worm shaft is driven against the torque disc springs in response to output torque. The shaft groove actuates the torque limiting switches, located above in the Control Center, to start and stop the motor. Two SPDT mechanical switches and two factory calibrated set screws independently respond to predetermined loads in both the open and closed travel directions by sensing the movement of the worm shaft, and interrupting the electrical power to the motor. The switches operate at any point of actuator travel. The precisely controlled movement of this system is the main torque limiting element of the Series 70.

AUXILIARY SWITCHES: Independent dry-contact (voltage free) SPDT mechanical switches are available to indicate travel position to remote customer control systems.

HEATER: A self regulating heater can be added to prevent possible damage to electrical components due to condensation build-up inside the actuator. Mounted in the actuator top plate for easy accessibility.

ELECTRICAL CABLE CONNECTIONS

A multi-pin, watertight cable receptacle offers full compatibility with today’s industrial wiring systems. Factory pre-wiring prevents errors and allows quick-connect field installation. Cord sets with connection/flying leads, or extension cords with connections on both ends can plug directly into the receptacle.
Global Manufacturing, Service Around the Corner
To serve you locally, each region maintains a factory certified sales and service network for all Bray International products.
