Handle Accessories and Locking Mechanisms
**Flowserve Worcester Controls handle accessories make high temperature valve operation safe, position lockout secure and accidental operation unlikely.**

**High Temperature Extension Handles**

New OSHA requirements demand handle temperatures below 150°F for operator safety. For high temperature applications, Worcester Controls has developed the V48 extended lever and V59 extended oval handles. The solidly supported bracket and linkage extends stem seal life and positions the handle well above the insulation. The lever handle is carbon steel, zinc-plated; the oval handle is stainless steel. The bracket is carbon steel, zinc plated and polyester coated. Available on all 1/4" - 2" reduced port and 1/4" – 1-1/2" full port 3-piece and flanged valves. To order factory installed, place the code V48 or V59 at the end of the valve model number.

**Example:** 1-1/2" 4466TSE V59. A field mounting kit has an ordering code that consists of the valve size, the letters “HK”, the valve series number, and either V48 or V59.

**Example:** 1-1/2" HK44V48.

**Spring Return Handles**

Worcester’s Series SR44 spring return handles provide safe, powerful fail closed or open* operation. Mounting the handle to a ball valve creates a reliable filling, sampling or dispensing valve. They are available for use on 1/4" - 2" reduced port and 1/4" – 1-1/2" full port 3-piece and flanged valves.

SR44 handles come in two sizes. The single spring unit (10SR 44) is mounted to 1/4" - 1” valves; the double spring unit (20SR 44) is mounted to 1-1/4" – 2” valves. The non-waterproof housing is made of aluminum with carbon steel, zinc-plated parts. To order factory mounted, place the code letter “A” after the valve size in the valve model number. Order either a 10SR44 or 20SR44 spring return handle as a separate line item.

**Example:** Qty 1-1”A4446PMSE and Qty 1-10SR44 spring return handle. To order a kit for field mounting, specify either a 10SR44 or 20SR44. The appropriate mounting kit must also be ordered as a separate line item.

---

*Standard configuration is fail closed. Consult the Custom Products Department for fail open operation.
**A significant feature of the Worcester valve design is that handle accessories can be field mounted without disturbing pipe integrity.

The only exception is the K/HL locking mechanism.
Safety Oval Handles

Worcester's oval handles provide a safe and reliable method of eliminating accidental operation of valves in such applications as steam service that have piping along walkways or near hose racks. Oval handles also allow the valves to be closed more slowly, reducing the chances of water hammer on liquids. V32 handles are of stainless steel. C0202 handles are of carbon steel. Available on all 1/4” - 2” reduced port and 1/4” – 1-1/2” full port 3-piece and flanged valves. To order, place the code V32 or C0202 at the end of the valve number.

Valve Locking Mechanisms

Worcester’s locking mechanisms provide a positive, tamperproof way to prevent accidental or unauthorized valve operation. They can be locked securely in either the open or closed position (lock not included). The basic locking mechanism is the Model K/HL. For factory mounting, place the code K after the valve size in the valve model number. Example: 1” K4466TSE. For a field mounting kit, the ordering code indicates the valve size, HL, the valve series number, and the revision number. Example: 2” HL44R2. To meet OSHA Rule 29, Worcester introduces the V60 tamper proof locking mechanism, available on standard and extended lever (V48) valves. To order, place V60 at the end of the valve model number. Locking mechanisms are also available for all oval handle operated Series 94 valves (1/2” - 2”) and for valves with the V32 oval handle. Order through the Custom Product Department.

*C Standard configuration is fail closed. Consult the Custom Products Department for fail open operation.
